PNRS108B Lifespan II

136 hours/8 credits

The course is designed to familiarize the student with nursing care of the family unit in the community and acute care settings. The student will apply concepts of normal growth and development in providing holistic nursing care and planning health promotional teaching interventions. The course features modules on the care of the pregnant female, birthing process, routine newborn care, well child care, reproductive health, and sexually transmitted infections. Patient care skills will be learned and demonstrated in the laboratory and clinical environment. Outside work required in this course includes textbook reading, completing questions based on reading, defining key terms in preparation for the lab, and Computer Assisted Instruction (CAI) modules.

Prerequisite: PNRS 107

Prerequisite or Corequisite: PNRS 105

PNRS 109 Practice Transitions

30 hours/2 credits

A variety of guest lectures, computer assisted instruction and tailored instruction will assist the student to build competence and confidence in his/her future role as a nurse. Outside work is required in this class including Computer Assisted Instruction (CAI) tutorials and practice tests.

Prerequisite: PNRS 101, 102, 103, 104, 106, 107, 108A

Prerequisite or Corequisite: PNRS 105, PNRS 108B
